HOCHTIEF to build road in England and Salzburg Main Station for EUR 85 million

Salzburg transportation hub to become a through-station - extension of two motorway sections in Kent

HOCHTIEF Construction has been awarded the contract for two transportation projects in England and Austria with a total volume of more than EUR 85 million. HOCHTIEF Construction Austria will be expanding the main railway station at Salzburg. The contract has a volume of EUR 50 million. HOCHTIEF Construction UK is extending two sections of motorway in a joint venture in the county of Kent. The contract has a total volume of EUR 64 million and HOCHTIEF's share amounts to around EUR 35 million.

While maintaining day-to-day operations, the Salzburg hub will be enlarged into a through-station with a capacity of 25,000 passengers per day. As part of the project, which will be running until 2014, HOCHTIEF will be revamping platforms with a total length of over three kilometers and replacing the current pedestrian tunnel with a broad passage linking two parts of the city. Close to Kent International Airport, HOCHTIEF Construction UK is extending the two sections of motorway to a length of eight kilometers. One particularly challenging aspect will be the underpass beneath an operating railway line. The project will be completed in 2012.
